November 19, 2026

Atlanta - Georgia county election officials have completed Risk-Limiting Audits (RLAs) of 6 statewide contests and all 14 Congressional contests from the November 2026 General Election, which is a record number of statewide and federal RLAs to be conducted following an election in US History. The RLAs confirmed the contest outcomes in all 20 audited contests.

“Georgia continues to be the gold standard for election security and transparency, and that success is built on the hard work of our county election officials,” said Secretary of State Brad Raffensperger. “By conducting the largest Risk-Limiting Audit in Georgia’s history, our local election officials have once again proven the accuracy and integrity of Georgia’s voting system, giving voters hard, mathematical proof that their vote is secure.”

The following contests were audited:

- US Senate
- Governor
- Lt. Governor
- Secretary of State
- Attorney General
- Commissioner of Agriculture
- All 14 Congressional Districts

A risk limit of 5% was set for the RLAs, a limit that is among the best in the country for jurisdictions who conduct RLAs. In total, there were 600 batches of ballots audited consisting of 1,050,204 million ballots and 1,539,171 vote opportunities. A vote opportunity is defined in the audit report as “one ballot checked for one contest.” In total, “99.98% of vote opportunities audited matched the reported results across all 20 audited contests.” The approximately 0.02% of vote opportunities with a discrepancy is well within the expected margin of error for a hand tally.

More details about the audit can be found in this report produced by VotingWorks.

“VotingWorks is proud to support the State of Georgia in running one of the most comprehensive post-election audits in US history using open-source software anyone can check,” said Ben Adida, Executive Director of VotingWorks.
